Current Deployments

The current eagle-i network comprises nodes deployed at twenty five institutions across the United States and indexed by eagle-i central search. Over 26,000 searches have been conducted at www.eagle-i.net in the last several months. Join our [mailing lists](#) to stay up to date and involved with the project. For more information about the eagle-i network, visit eagle-i.net

Learn about how others are using and extending eagle-i software

- [Plumage](#): developed at UCSF, Plumage is a tool to create an institutional lightweight front-end for searching and browsing Core Facilities information stored in an eagle-i repository. The tool generates static, search engine optimized pages, and leverages the eagle-i ontology and eagle-i's APIs.
