

SHRINE 3.3.2 Chapter 8.2 - Change the Default Logo

The logo in the top left of the webclient can be changed by specifying a file path or URL to an image (PNG, JPG, GIF, etc). If using a file path, it must be accessible to tomcat (i.e lib, webapps, etc). Image can be any size, it will be resized to fit the header.

```
webclient.logo = "/path/to/ENACT_LogoFile_2023-03_White.png"
```

For the ENACT network the following logo should be used.

[ENACT_LogoFile_2023-03_White.png](#)
