

Welcome to eagle-i

Unsupported Software

The eagle-i software is still available to the open-source community, but is no longer supported or maintained.

Making open science happen...

eagle-i is an ontology-driven, RDF-based software platform for creating, storing and searching semantically rich data about research resources of all kinds. eagle-i is built around semantic web technologies and adheres to [linked open data](#) principles.

The collage displays various features of the eagle-i platform:

- Search Interface:** A search bar with the text "Your gene's disease" and a "Try our new iPS Cell Search" button. Navigation links include ABOUT, GET INVOLVED, NEWS & EVENTS, FAQ, CONTACT US, and HELP.
- Search Results:** A list of search results for "ALS" (Amyotrophic Lateral Sclerosis). The results are filtered by "Cell Lines" and "Diseases". The results include details such as "Reagent", "Description", "Location", "Source", and "Status".
- Cell Line Detail View:** A detailed view of a specific cell line, "ALS-ALS (SOD1A144F)". The view includes fields for "Reagent", "Description", "Location", "Source", and "Status".
- SWEET Interface:** A "SWEET" (Semantic Web Entry & Editing Tool) interface for editing the cell line entry. It includes a "Reagent" field, a "Description" field, and a "Status" field.
