Update node configuration file

Configurations specific to the node (as opposed to properties for the applications) are located in the `local-node.xml` file. Assuming that tomcat is currently running and you are in the **SSH** terminal:

1. Stop tomcat (Customize eagle-i repository -> Stop the running tomcat instance)
2. Go to the eagle-i configuration directory
    - **`cd /opt/eaglei/conf/`**
3. Using the text editor of your choice, edit the `local-node.xml` file
    - **`vim local-node.xml`**
4. Follow the instructions in the comments to update the **<node></node>** section. Specifically, update lines 14, 21, 24, 26, 29.
5. Save your changes.
6. Start tomcat (Customize eagle-i repository -> Start tomcat)

local-node.xml

```
<local>
        <!-- Global node information is required to access centrally curated resources -->
        <!-- This section should be used as is, unless otherwise directed -->
        <global URL="http://global.eagle-i.net">
                <institutionList>
                        <institution URI="http://purl.org/eagle-i/app-ext/#ERO_0000065_29"
                                graphURI="test29">
                                <namespace>http://global.eagle-i.net/i/</namespace>
                                <label>Centrally Curated Resources</label>
                                <logoSrc>https://www.eagle-i.net/logos/logo_global.png</logoSrc>
                        </institution>
                </institutionList>
        </global>
        <node URL="https://ec2-54-175-59-6.compute-1.amazonaws.com/"> <!-- REQUIRED: url for the node -->
                <institutionList>
                        <!-- REQUIRED: URI and graphURI for the institution/repository -->
                        <!-- NB: URI will eventually be allocated by eagle-i's global repository; -->
                        <!-- for the time being, choose a URI in your repository's instance namespace. --
>
                        <!-- This URI doesn't need to be resolvable, it is simply an identifier -->
                        <!-- NB: graphURI is required but is not currently used. -->
                        <institution URI="http://unique.key.for/insitution" graphURI="inst">
                                <!-- REQUIRED: This is the namespace that the instances are in for this
repository. -->
                                <!-- The namespace needs to be a well formed url -->
                                <namespace>http://ec2-54-175-59-6.compute-1.amazonaws.com/i/</namespace>
                                <!-- REQUIRED: This is the label that is used in the UI display. -->
                                <label>AMI test repository</label>
                                <!-- OPTIONAL: Logo to be displayed for institution. -->
                                <!-- If not supplied, the default is blank square. -->
                                <logoSrc>https://alaska.qa.eagle-i.net:8443/sweet/images/eaglei-medium-
blue.png</logoSrc>
                        </institution>
                </institutionList>
        </node>
</local>
```
