

net.shrine.metadata. ExceptionWhileRequestingQueuedResults

Summary

The SHRINE QEP service encountered an exception while requesting an update on a QUEUED query result.

Since 1.24

Explanation

The requested query earlier entered at least one CRC's queue, and was reported in a QUEUED state. The QEP was unable to request an update because of a problem detected on the client side. The problem most likely involves communication between the QEP and the hub.

Resolution

If you are a user contact your local admin.

If you are the QEP admin, examine the included stack trace to understand and resolve the problem.
