

9.1 - Configuring cell_config_data.js

After configuring the Data Steward in shrine.conf, you will then need to configure the SHRINE cell configuration to look for query topics. This file is located within /opt/shrine/tomcat/webapps/shrine-webclient/js-i2b2/cells/SHRINE/cell_config_data.js:

```
{
  files: [
    "SHRINE_ctrl.js",
    "i2b2_msgs.js"
  ],
  css: [],
  config: {
    // additional configuration variables that are set by the system
    name: "SHRINE Cell",
    description: "The SHRINE cell...",
    category: ["core", "cell", "shrine"],
    newTopicURL: "https://your_fqdn_url:6443/steward/client/index.html#/topics",
    readApprovedURL: "https://your_fqdn_url:6443/shrine/rest/i2b2/request"
  }
}
```

The lines of note are the "newTopicURL" and "readApprovedURL". These urls should reflect your SHRINE instance, and will guide SHRINE to look for query topics for the Data Steward.
